

SEMINAR SERIES

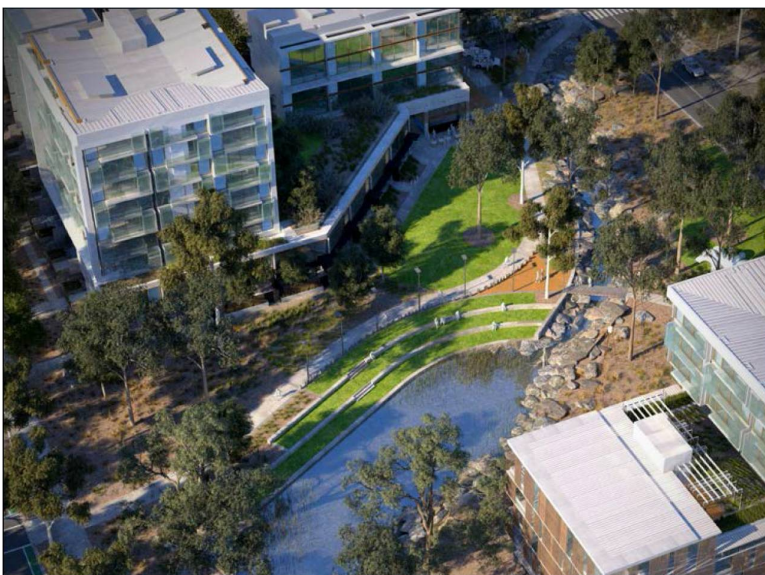

BROUGHT TO YOU BY ENVIRONMENT AND PLANNING DIRECTORATE & ENVIRONMENT INSTITUTE OF AUSTRALIA AND NEW ZEALAND

STRATEGIC PLANNING FOR SUSTAINABILITY

Sustainability in strategic planning considers innovative outcomes that respect people, place and the planet. It sets out a clear vision and principles at an early project stage and guides subsequent planning and design, such as public realm and infrastructure upgrades, Territory Plan codes and individual developments.

How can we plan for sustainable communities?

This seminar will explore key strategies applied to strategic planning for urban infill, including planning for active travel, green infrastructure, active living and low carbon precincts with a particular focus on the city and inner north.

This interactive seminar series showcases perspectives on a common sustainability issue. Held bi-monthly, you'll hear views from the ACT Government and from a private environment based expert. Each session will provide you with:

- innovative ideas
- targeted learning
- professional development
- networking

Environmental and other professionals across the ACT and surrounding region are encouraged to attend.
